

This document provides plots for the datasets not presented in the main paper. Time evolutions of the spatially averaged median velocities of small droplets, together with their terminal velocities, are presented in Figures D1-D25. Time evolutions of the total number of droplets, the liquid volume fraction, and the Sauter mean diameter (D_{32}) of droplets are provided in Figures D26-D50.

Fig. D1. Exhalation and inhalation velocities for dolphin J normal breath
